## Course of US dollar Index (USDIX)

The currency basket of the US dollar Index (USDIX), which started in March 1973, is divided in Euros (57.6%), Japanese yen (13.6%), British pounds (11.9%), Canadian dollars (9.1%), Swedish crowns (4.2%) and Swiss francs (3.6%).

Since the USDIX went up in 1995 from a long term resistance level of 80 to a high of 120 in 2001.

At the time the Euro was introduced (January 1, 2001), it dropped to a low of 72 in March 2008, but was then followed by a strong upward correction to \$ 87 well above the historic resistance level.

After a new correction to 74 in early December 2009, from the second half of 2011 into 2012 there was another strong recovery to above the 80 level and reaching a high of 84 in August 2012. Since then, the index moved in a relatively stable range before moving up strongly in the course of the second half of 2014.

In the last week of January 2015 the index reached a high above 100 for the first time since 2003. After having weakened in 2017, reflected in a correction to around 92.50, the USD Index has moved up again to a current level around 100.

Meanwhile, a make-up of the basket is overdue for revision, as China has emerged to the world's second trading partner since it became a member of the World Trade Organization in late 2001.
