

Uraniumletter INTERNATIONAL

the international independent information and advice bulletin for uranium resource investments

June 2021

Overviews as at June 30, 2021

Marino G. Pieterse, publisher and editor

- ▶ Global long-term U₃O₈ demand to be easily fulfilled by Kazakhstan and Russia
- ▶ US government needs to support national stand-by producers to directly justify positive sentiment in the market

OVERVIEW of U₃O₈ PRICES

Top 11 in % world total	79		67	79	85

x Future reactors envisaged in specific plans and proposals and expected to be operating by 2030

* France generates 71.6% from its electricity from nuclear energy. To be more balanced through an increase of renewables, this share may be reduced to 50% or approximately 40 reactors by 2025

** South Korea's 2017 elected government has introduced strongly opposed nuclear phase-out plans by 2040; nuclear production to drop from 31% today to 22% by 2030

*** Up until 2011, Germany obtained 25% of its electricity from its 17 nuclear reactors, but nuclear energy phased out in 2011 when 8 reactors shut down immediately and currently 7 remaining reactors to be closed by 2022

**** Up until 2011, Japan was generating some 30% of electricity from its 55 reactors and this was expected to increase to at least 40% by 2017. The plan is now for at least 20% by 2030 from a depleted fleet. Currently, 42 reactors are operable, with 9 having restarted since, 21 reactors are currently in the process of restart approval and expected on line by 2040

New plants coming online are largely balanced by old plants being retired. Over 1998-2018, 103 reactors were retired as 105 started operation. However, the reactors grid connected during this period were larger, on average, than those shutdown. so capacity increased by 31 GW. The referene scenario in the 2019 edition of The Nuclear Fuel Report has 154 reactors closing by 2040 and 289 new ones coming online, including 21 restarted Japanese reactors

* featured as a **Special Situation** and included in Shortlist of investment recommendations

1) listed on London Stock Exchange) as at November 16, 2018 through an IPO offering of 15% of the Company's outstanding shares at US\$ 11.60

2) also 49% interest in zinc project in Turkey

3) 53% held by Nexgen Energy

4) announced on September 8, 2020 to acquire all of Westwater Resources ' United States uranium assets in enCore shares; transaction to be closed on or before December 31, 2020

5) combined uranium-vanadium project

6) holds 75% interest in flagship uranium-vanadium Langer Heinrich Mineu in Namibia; CNNC of China holds 25% stake; also assets in Canada and Australia; sold 85% interest in uranium mine in Malawi to Lotus Resources

7) Rio Tinto completed sale of Rössing Mine, Namibia to CNNC of China effective July 19, 2020 for an initial cash payment of \$ 6.5 million plus a contingent payment of up to \$ 100 million

8) name change from Boss Resources effective November 26, 2020; also nickel-copper project in Sweden and gold project in Senegal

Total market capitalization top listed uranium companies - June 30, 2021: US\$ 21,800.0 million
